

# 25X17

## 117 DAY CORN SEED HYBRID

ADAPTABLE

### KEY BENEFITS

- Extreme ear flex for high yields at low populations
- Thrives under low rainfall in western South
- Robust size with excellent heat tolerance

### PRODUCT IMAGES

Nebraska Test Plot - Fall 2024

### HYBRID OVERVIEW

25X17 is a robust hybrid that thrives in the heat of the southern U.S., offering high yield potential and stability. With its genetic similarity to 42X16, it brings a southern flair with added plant size and robustness. This hybrid is designed for dual-purpose use, excelling in both grain and silage production, particularly in the northern parts of the southern region. 25X17 might have the most ear flex you'll ever observe.

### PLACEMENT RECOMMENDATIONS

Versatile across the Mid-South and Deep South in all soil types as both irrigated and dryland. It performs better in the west, particularly in dryland Texas to southeast Kansas, compared to 42X16, which is better suited for the eastern environment.

### AGRONOMIC TIPS

This hybrid's strong ear flex allows for reduced planting populations, maximizing yield potential even under stress. While it boasts excellent drought tolerance and good plant health, it's advisable to monitor for ear mold in wetter conditions.

### SUITABLE GROWING REGIONS

FL, PA, MO, MD, VA, DE, OK, TX, AR, LA, MS, AL, GA, SC, NC, TN, KY, KS

### ATTRIBUTES

Productive Soil	9
Marginal Soil	9
Drought Tolerance	9
Yield	9
Plant Health	7
Green Snap	6
Drydown	6
Plant population	14-28K
Use	Dual Purpose

### SPECS

<b>Silking</b>	1450
<b>Black Layer</b>	2810
<b>Ear Type</b>	Flex
<b>Test Weight</b>	Average
<b>Corn On Corn</b>	Good
<b>Early Plant Vigor</b>	Good
<b>Root Rating</b>	Average
<b>Stalk Rating</b>	Good
<b>Goss Wilt</b>	Excellent
<b>Gray Leaf Spot</b>	Very Good
<b>Northern Leaf Blight</b>	Very Good
<b>Stalk Anthracnose</b>	Good
<b>Maturity</b>	117
